

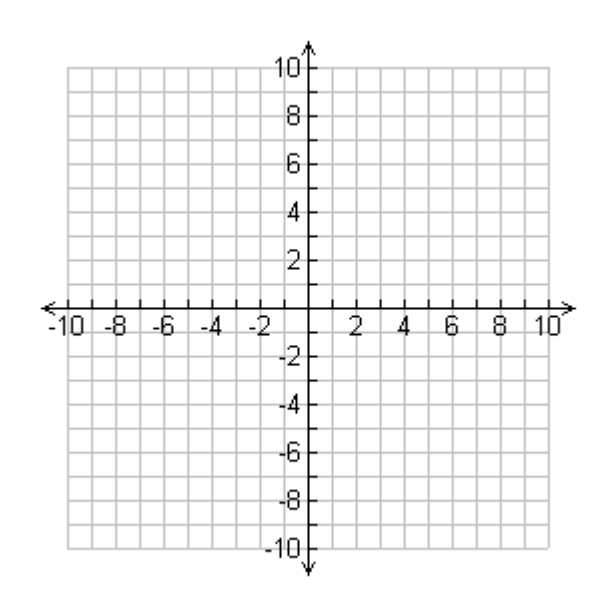

Graphing Quadratics – Analyzing and Comparing Functions: Day 2

Unit 2A: Quadratic Functions – Representations

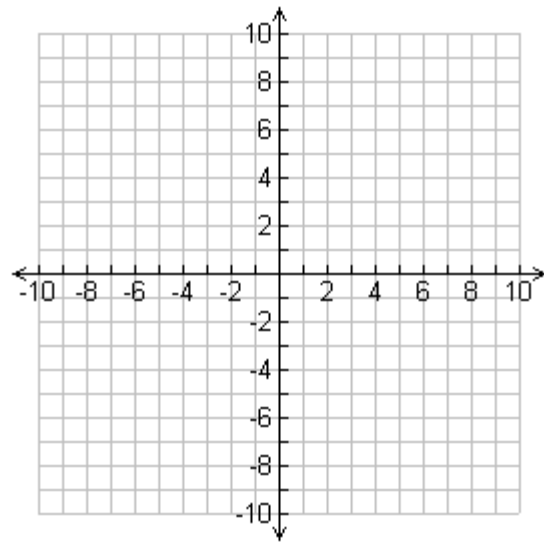

For each of the following quadratic functions you need to:

- Graph the quadratic functions using any method on the same graph (Use different colors)
- Identify the Axis of Symmetry of each function
- Identify the X-INTERCEPT(S) of each function
- Identify the Y-INTERCEPT of each function
- Identify the VERTEX of each function
- Compare the two functions with each other

1. $y = -2x^2 - 4x - 1$

2. $y = 2x^2 + 8x + 10$

3. $f(x) = x^2 + 2x - 2$

4. $f(x) = -2x^2 + 4x$
